Laboratory Continuous Assessment Sheet

First / Second Half of 2026

Course Name: Mobile Application Development Laboratory

Name of the Teacher: Mr. Anandkumar Pardeshi

Name of the Student: Parth Sandeep Chaudhari

Roll No: 5024112	**Semester: V**
Batch: B1	**Practical No:** 5
Date of Practical: 24 / 8 / 2026	**Date of Report Submission:** 2 / 9 / 2026

Title: To design layout of flutter app using layout widgets

Course Outcome: Design & implement user interfaces using flutter widgets, layouts, & animations, ensuring responsive & interactive

Assessment

Sr. No.	Parameter for Assessment	Marks	Rubrics		
1.	Readiness to perform experiment (02Marks)	2	Above Average (02)	Average (01)	Below Average (00)
2.	Active participation in performance (02 Marks)	2	Above Average (02)	Average (01)	Below Average (00)
3.	Report writing (02 Marks)	1	Above Average (02)	Average (01)	Below Average (00)
4.	Interpretation of result (02 Marks)	2	Above Average (02)	Average (01)	Below Average (00)
5.	Regularity in Submission (02 Marks)	2	Timely (02)	Late (01) (≤ 2 Weeks from the date of Practical)	Very Late (00) (> 2 Weeks from the date of Practical)
Total Marks (10):		9			

Teacher's Signature: 02/09/24 **Date:**

EXPERIMENT 5

AIM: To design an attractive Flutter application layout using different layout widgets.

OBJECTIVE: To understand and use Flutter layout widgets such as Row, Column, Container, Expanded, and Padding to arrange UI elements.

COURSE OUTCOME: Design and implement user interfaces using Flutter widgets, layouts, and animations, ensuring responsiveness and interactivity

THEORY:

Flutter provides layout widgets to organize and position elements on the screen. Row arranges widgets horizontally, Column arranges them vertically, Container provides styling and spacing, while Expanded distributes available space between widgets. These widgets can be combined to create structured and responsive application layouts.

Software Requirements:

- Flutter SDK
- Dart
- Android Studio / DartPad
- Web browser

CODE:

```
import 'package:flutter/material.dart';

void main() => runApp(const MaterialApp(
  debugShowCheckedModeBanner: false,
  home: FitnessPage(),
));

class FitnessPage extends StatelessWidget { const
  FitnessPage({super.key});

  Widget build(BuildContext context) {
    return Scaffold(
      backgroundColor: const
      Color(0xFFF5FBF9), appBar: AppBar(
        title: const Text('Fit Tracker',
            style: TextStyle(fontWeight: FontWeight.bold)),
        centerTitle: true,
        backgroundColor: const Color(0xFF00897B),
        foregroundColor: Colors.white,
      ),
      body: SingleChildScrollView(
        padding: const EdgeInsets.all(20),
        child: Column(
          crossAxisAlignment: CrossAxisAlignment.start,
          children: [
            const Text('Hi, Alex ■',
                style: TextStyle(fontSize: 24, fontWeight: FontWeight.bold)),
            Text("Here's your activity for today",
                style: TextStyle(color: Colors.grey)), const
            SizedBox(height: 20),
```

```
Container(
  padding: const EdgeInsets.all(18),
  decoration: BoxDecoration(
    gradient: const LinearGradient(
        colors: [Color(0xFF00897B), Color(0xFF26C6DA)]),
    borderRadius: BorderRadius.circular(18),
  ),
  child: const Row(
    children: [ CircleAvatar(
        radius: 28,
        backgroundColor: Colors.white,
        child: Text('■', style: TextStyle(fontSize: 24)),
      ),
      SizedBox(width: 14),
      Expanded(
        child: Column(
          crossAxisAlignment: CrossAxisAlignment.start,
          children: [
            Text('Daily Goal: 8,000 steps', style:
                TextStyle(
                    color: Colors.white, fontSize:
                    16,
                    fontWeight: FontWeight.bold)),
            Text("You're 64% there - keep going!",
                style: TextStyle(color: Colors.white70)),
          ],
        ),
      ),
    ],
  ),
),
const SizedBox(height: 22),
const Text("Today's Stats",
    style: TextStyle(fontSize: 18, fontWeight: FontWeight.bold)), const
SizedBox(height: 12),
Row(children: [
  Expanded(child: statBox('■', 'Steps', '5,120')), const
  SizedBox(width: 12),
  Expanded(child: statBox('■', 'Calories', '312 kcal')),
]),
const SizedBox(height: 12),
Row(children: [
  Expanded(child: statBox('■', 'Water', '1.2 L')),
  const SizedBox(width: 12),
  Expanded(child: statBox('■', 'Sleep', '7h 20m')),
]),
const SizedBox(height: 22),
Card(
  child: Padding(
    padding: const EdgeInsets.all(16), child:
    Row(
      children: [
        const Icon(Icons.lightbulb,
            size: 28, color: Colors.orange), const
```

```
                SizedBox(width: 14),
                const Expanded(
                  child: Text(
                    'Flutter layout widgets like Row, Column, and Expanded '
                    'make it easy to build responsive fitness dashboards.',
                  ),
                ),
              ],
            ),
          ),
        ),
      ],
    ),
  );
}

static Widget statBox(String emoji, String label, String value) => Container( padding:
    const EdgeInsets.all(16),
    decoration: BoxDecoration(
      color: Colors.white,
      borderRadius: BorderRadius.circular(16),
      boxShadow: const [BoxShadow(blurRadius: 8, color: Colors.black12)],
    ),
    child: Column( children:
      [
        Text(emoji, style: const TextStyle(fontSize: 30)),
        const SizedBox(height: 8),
        Text(label, style: const TextStyle(fontWeight: FontWeight.bold)), const
        SizedBox(height: 2),
        Text(value, style: const TextStyle(color: Color(0xFF00897B), fontSize: 12)),
      ],
    ),
  );
}
```

OUTPUT:

CONCLUSION:

The Flutter application layout was successfully designed using Row, Column, Container, Expanded, and Padding widgets to build a responsive fitness tracker dashboard with a gradient profile banner, stat cards, and a tip card.
